

## BB. ROYAL COSMETIC SERVICES

### LASER HAIR REMOVAL WITH CYNOSURE'S ELITE

For people who are tired of shaving, tweezing, and waxing to remove unwanted hair, laser hair removal has become the preferred option—and a beautiful solution.

During laser hair removal, a laser beam passes through the skin to an individual hair follicle. The intense heat of the laser damages the hair follicle, which inhibits future hair growth.

Wavelengths for Hair Removal:

The classic 755nm wavelength has high melanin absorption characteristics and proven long-term results for pigmented lesion removal and hair reduction, permanently reducing hair by an average of 85 % after just five treatments.

The 1064nm Nd:YAG wavelength is the safest wavelength for permanent hair reduction on darker skin types and tanned skin and is the wavelength of choice for treating facial and leg veins, the most common form of vascular lesions.

Our Cynosure's Elite Laser machine, offer these two optimal wavelengths in one system. This allows us to switch between wavelengths during a single procedure and select the most appropriate laser for any given hair or skin type. We can also perform multiple procedures on the same client during the same visit.

### LASER SKIN REVITALIZATION

It's no secret that the skin revitalization market is growing every year. More people want an appearance that matches the way they feel on the inside: young and full of possibilities. These people

are turning to less invasive treatments, like laser treatments.

By adding skin revitalization treatments to our practice with the help of Cynosure's unmatched advancements in light-based aesthetic technology, we'll provide better and faster results for our patients, and with greater comfort.

With a unique combination of leading-edge technologies, our skin revitalization light-based treatments target all three layers of photo damaged tissue, epidermal pigment, mid-dermal wrinkles, and deep-dermal laxity.

### PIGMENTATION

Pigmentation affects so many people. Although, some types of pigmented lesions exist at birth, often times pigment represents one of the first signs of aging. That is why so many people are interested in removing pigment.

There are several options to treat pigmented lesions. The most important issue is diagnosing the nature of pigmentation and in some cases biopsy is necessary to rule out any suspicious lesion. We can use microdermabrasion, microneedling, mesotherapy, IPL or Laser therapy.

Most patients find the procedures tolerable and require no numbing cream or anesthesia. They often compare the laser pulse to a snap of a thin rubber band( in case of laser treatment). Most pigmented lesions will require only few treatments to be near completely removed. Darker, deeper and larger pigmented lesions may require additional treatments.

### VASCULAR TREATMENT

Some People seek treatment for vascular lesions or birthmarks for both cosmetic and medical reasons. Lasers allow for quick treatment of vascular lesions

without damaging the surrounding skin. Light is absorbed by the blood, destroying the vessel. Over time, the vessel disappears, restoring the skin's natural appearance. Some lasers, treat all types of vascular lesions, including facial and leg telangiectasias, spider veins, hemangiomas, mature and blebbed port-wine stains, and rosacea.

### FACIAL TREATMENTS

#### HYGIENE FACIAL

A basic facial that provides cleansing, Toning, exfoliating and hydrating the skin. Extractions are performed if necessary, followed by high frequency that heals, disinfects and tones the skin. This facial is customized based on skin types and conditions. This facial is customized.

#### ADVANCED FACIAL

A deep cleansing, exfoliating and rejuvenating facial, designed to work with your specific skin type. Galvanic machine will be used in order to further cleans skin and force in the active ingredients in to deeper layer of the skin, revealing more hydrating and well balanced skin.

### MASSAGE THERAPY

Massage Therapy can used to treat a variety of both Acute and Chronic conditions and is beneficial for people of all ages.

It can be used for Injury prevention, Stress reduction, Headaches, Insomnia, Muscle tension, Pregnancy, Arthritis, Tendinitis, Whiplash and much more.

### BOTOX OR DYSPORE

BOTOX Cosmetic or Dysport is a therapeutic muscle-relaxing agent derived from the bacterium, Clostridium Botulinum. Physicians have utilized BOTOX or Dysport to correct visible signs of stress and aging. We use the

highest quality, brand name BOTOX and also Dysport for maximum effectiveness and safety. The injections are performed at Green Clinic under supervision of Dr. Alireza Semsar

How does BOTOX Cosmetic or Dysport work? They prevent the muscles from allowing responses to brain signals. As a result, the muscle relaxes and the overlying skin remains unwrinkled and smooth. Using a very fine needle, BOTOX or Dysport is injected into the specific muscle that is contracting and causing the lines and wrinkles on the face. Treatment is effective, safe, and takes approximately 10 minutes. It is only done by a physician.

### DERMAL FILLERS

Dermal filler contains hyaluronic acid (HA) which is a substance naturally found in your skin. Natural aging and other factors such as sun exposure and lifestyle reduce the amount of HA in the skin and compromise its firmness and elasticity causing undesirable folds, wrinkles, and sagging.

Immediately after your treatment, you will discern a smoothing of the wrinkles and folds. When the effect of the treatment begins to diminish, you can replenish the area as needed. We use the highest quality, brand name fillers for maximum effectiveness and safety.

Dermal filler is in the form of a soft gel and would be injected under your skin by a trained physician through syringe application. In order to create a more comfortable experience, some dermal fillers are premixed with lidocaine. The numbing effect of lidocaine prevents discomfort. We usually use specific cannulas to prevent any bruising. All filler injections are performed at Green Clinic under supervision of Dr Alireza Semsar.

## What is Biomeridian Test?

Biomeridian testing is a noninvasive method used to assess the energy meridians (channels) of the body, and it can tell you:

The functional status of your meridians and their related organs, systems, or functions, by determining if they are stressed, balanced, or weakened, and by how much.

Which specific nutritional products will bring your unbalanced meridians back to balance.

If a product you have in hand will bring you to balance.

If you have specific sensitivities to foods, molds pollens, etc.

## WHO WOULD BENEFIT FROM THIS TYPE OF STRESS TESTING?

This test would benefit anyone interested in examining and improving the functional energetic status of their own bodies. This applies to those who are unwell and looking to improve their health as well as those who have no diagnosable illness but would like to optimize their current state of health and possibly prevent future negative health issues.

## OUR SERVICES:

- Laser Hair Removal
- Laser Tattoo Removal
- Hyperpigmentation
- Sagging, wrinkles, acne scars
- Face Lifting & Facial treatments
- Stretch mark and skin tightening
- Cellulite Reduction
- Cosmetic Consultation
- Skin Care & Supplement Supply

## What are Demodex mites?

Demodex mites are microscopic parasites that live under hair follicles and in oil glands. They are linked to many issues such as Demodex mites rosacea and Demodex acne.

Recent studies have found that 100% of people have mites present on them, however they tend to become a problem when a high population density is found.

A high population density of Demodex mites in humans have been linked to all manner of hair and skin problems.

These symptoms indicate that a high population density of mite is present and needs to be treated effectively.

Hair loss is not a new problem. When dealing with hair loss, people always over-treat their scalps with too many products and treatments, hoping that it will be deeply revitalized and hair will grow again. However, they might have missed out something very important in the process. Our pets, be them cats or dogs are always infected with mites or skin parasites that feed on the keratin layer of the skin. Similarly, we have unknowingly become the host for those dangerously harmful microorganisms known as hair mites which cause hair loss .

To tackle this problem, we have to start from the root.
